The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 10-14 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

This is NEW MATTER rejection since the recited "not more than 30 % by weight of a reinforcing fiber" does not have support in original specification since said "not more than 30 % by weight" encompasses 0% and 3 % for example. The disclosure at page 16, lines 10-13 shows "not more than 30 % by weight", but it is connected with the disclosure in bridging PP of pages 15-16 wherein "the content of the reinforcing fiber in the total amount of the resin composition must be 20 to 40 % by weight" is taught. Furthermore, contrary to applicant's statement, table 2 does no support said recitation.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1, 2, 4-6 and 10-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Asai (US 2002/0123557 A1) in view of Isutsumi (US 5,514,748) and The Handbook of Fillers.

Rejection is maintained for reason of record with following response.

Again, applicant's response (with previously presented Fig. A) has been considered, but the scope of claim is broader than the actual showing in example 1 (components and amounts thereof). For example, claim 1 recites 33-50% by weight of an inorganic powder and 20-30% by weight of a reinforcing fiber, but the example 1 uses 40% by weight of spherical silica powder and 30% by weight of glass fiber.

With respect to new claims 10-15, the recited "not more than 30 % by weight of a reinforcing fiber" encompasses 0%, 5% or 10 % by weight, for example, and thus the scope of claim is broader than the actual showing in examples 1-3. Note that applicant had considered the example 3 as an inventive example at the time of invention, and now applicant asserts that it is not. Such assertion has little probative value

More showing would be needed for unexpected results.
